

Pam Danesin

I started the Medical Laboratory Technology program at CNC and completed the second year at Cariboo College in Kamloops. I then completed my student training at PGRH, graduating from the program in 1985. Shortly after graduating I worked in McBride for almost one year. I have been working in Transfusion Medicine at PGRH since April 1989. During my earlier years in the Department I was the Regional Technologist for Transfusion Medicine and during that time I was able to travel to most facilities in Northern Health and to meet a lot of the technologists. I have been in charge of the Transfusion Medicine Department at PGRH since October 2002. I am also privileged enough to have had the opportunity to be a member of the Transfusion Medicine Advisory Group, Transfusion Medicine Technical Resource Group, and the Transfusion Medicine Communication Forum. I have also worked on many provincial projects including the CSA Compliance Project which was formed to meet the CSA Standards for Blood and Blood Products and to develop the provincial transfusion medicine procedure manual.
