- See it live in Vancouver at Women’s and Children’s Hospital. Limited seating.

One of the most urgent and important clinical and public health threats in infectious disease is the emergence of carbapenemase producing gram negative bacteria. As laboratorians, we must be equipped to handle this new challenge. This session will review the epidemiology, clinical implications, and microbiology diagnostic considerations of carbapenemase producing gram negative bacteria.

Note: variable terms are associated with this topic, such as CPO (carbapenemase producing organisms), CPE (carbapenemase producing enterobacteriaceae), CRE (carbapenem resistant enterobacteriaceae) and CRO (carbapenem resistant organisms).
